If we talk about the relevance of spiritual education of the younger generation, then the issue of spiritual education is undoubtedly of invaluable importance. If we lose vigilance and sensitivity, determination and responsibility in this matter, if we leave this extremely important matter to the mercy of fate, we may lose our spirituality, historical memory, immersed in our sacred values and nourished by them, and, ultimately, deviate from the path of universal progress to which we strive. The urgent problems arising in the field of spirituality in today's difficult era of globalization, in particular, the growing threat of a spiritual crisis in some regions of the world, require not only the preservation of the spirituality of our people, but also its improvement, in particular, the protection of the soul and consciousness of the younger generation from the effects of various harmful ideas and ideologies. Of course, the fact that such moral threats and ideological attacks can strike at national and religious veins, from which our children especially suffer, dictates the need to further strengthen ideological immunity and the spirit of ideological struggle among young people.

The spiritual world, spiritual existence are the most important aspects of society and human life. It is inextricably linked with the processes taking place in all spheres of society's development. There is not and cannot be any sphere of public life free from it. The sphere of the spiritual life of society is incredibly wide, deep in content, diverse in form. Spiritual life encompasses all products of the human mind and thinking, their achievements expressed in the accumulated cultural wealth of society, forms of social consciousness, ideas, views, imagination, worldview, morality of people, the whole spiritual world. Spiritual riches created and mastered by people in the process of long-term historical development, scientific, artistic, legal, religious, moral, philosophical and other forms of social consciousness, can include in the spiritual life of society as an entire sphere of worldview, as well as artistic works, aesthetic views. The spiritual life of society, in other words, includes spiritual production as a whole. In the process of spiritual production, the fruits of human thought are created - ideas, views, theories, teachings, concepts, systems of education and training, religious and artistic images, social norms and laws, commandments and structures, moral instructions, instructions, plans, programs. The products of spiritual production are also manifested

in manuscripts, books, inscriptions on stones, inscriptions, drawings, drawings, drawings and other forms.

When we look at the history of the formation and development of spirituality, the spiritual life of our wonderful people, which increases the socio-political activity of young people, adorns a person in spiritual and moral terms, we are convinced that its foundations are extremely strong. Spiritual education has its deep roots. The roots of spiritual education go back centuries. It would not be an exaggeration to say that one of the oldest civilizations in the world originated in our region, on the Turoni Land.

In Uzbekistan, science, culture and spirituality, the unique and wonderful riches of the human mind were laid down several centuries ago. We know perfectly well that the science, art, and culture of our country began to rise from ancient times, that its roots, its soil are deep, mighty and ancient. Spiritual wealth, science, intelligence have been serving the Uzbek nation and all mankind for centuries in the study of the mysteries of nature, medicine, philosophy, jurisprudence, theology, literary studies. The whole world knows the names of our great ancestors who discovered the treasury of sciences. It's an endless pride for us.

In order to strengthen attention to youth, as well as the rapid progress of the country along the path of original and original development, which began after independence, towards a great future, it is advisable to constantly improve culture, spirituality, education of the people, pay special attention to spiritual development, because the fate of development is decided by a spiritually mature young generation.

From the lessons of history, it is clear and clear that any state or society, believing in its material goods and focusing only on their multiplication, without thinking about the development of the culture of the people, the spiritual needs of a person, will certainly find itself in crisis. Spiritual perfection, knowledge, morality, faith-faith, philosophical outlook-priceless wealth for both man and society.

Today, ample opportunities have been created for the comprehensive development of young people. The creation of several higher educational institutions in our country, as a fruit of independence, for teaching foreign languages has become a particularly great historical reality. In particular, since the beginning of large-scale reforms in our country, the number of higher education institutions has increased by 2 times.

The expansion of trade, scientific, technical and cultural ties with foreign countries, the creation of enterprises with foreign capital in Uzbekistan, the organization of large-scale training of young people in the world's leading educational and scientific centers - all these are powerful factors in accelerating economic reforms in the republic, entering into world economic relations, achieving an equal and worthy position in the world community.

It should be noted that education and upbringing are the most important condition for human maturation and the formation of spirituality, as well as an important branch of the socio-economic, political, ideological, cultural life of the country. Because the development of society is directly related to the upbringing of spiritually mature and morally literate youth. When we imagine that tomorrow, the fate of our country today is in the hands of millions of young people growing up in educational institutions, it becomes clear that the education of the younger generation has been raised to the level of one of the leading issues of state policy.

Improvement of the state youth policy. For young people in our country:

- organization of field receptions of mature and responsible specialists for the consistent increase of employment and real incomes of young people, the development of education and science,

the improvement of state youth policy, increasing family responsibility for the upbringing of children, ensuring the interests of youth and minors, providing the necessary assistance.

- strengthening the ideological immunity of students, fuller satisfaction of intellectual and spiritual needs of young people, education of a highly educated and intellectually developed generation, increasing their spirituality and culture,
- Development of national content, creation and promotion of educational, scientific and educational, modern information resources, multimedia products in the state language that meet the needs of young people, organization of national games aimed at mobile Internet users, contributing to the high moral education of young people, further increasing their intellectual potential and social activity, improving the pedagogical culture of parents, increasing their duty and responsibility in raising children, educating young people with strong ideological immunity, creating and increasing the responsibility of parents for controlling the behavior of unorganized youth, unemployed youth, boys and girls who have fallen under the influence of "mass culture", organizing measures to prevent poverty, alcohol consumption and other vices.

The tasks of developing and implementing a program of measures to counter religious extremism and missionary activities, ensuring interethnic and interfaith harmony are defined.

On March 9-18, 2017, joint training seminars were held in higher educational institutions aimed at preventing information attacks that threaten the consciousness of young people, forming a culture of using the Internet and other information resources among young people. More than 410 students took part in the training seminar.

In 2017, the sports competitions "Barkamol avlod-2017" among students of academic lyceums and professional colleges were held in the city of Jizzakh.

Objectively speaking, the state youth policy in Uzbekistan continues consistently with clear goals, in stages, on the basis of comprehensive measures.

Shavkat Mirziyoyev's nomination of 5 important initiatives in this direction to establish systematic efforts in the social, spiritual and educational spheres marked the beginning of a new stage in the history of Uzbekistan in the field of education and upbringing of youth.

The first initiative will serve to increase the interest of young people in music, painting, literature, theater and other types of art, revealing their talent.

The second initiative is aimed at creating the necessary conditions for the physical hardening of young people, for the manifestation of their abilities in the sports field.

The third initiative is aimed at organizing the effective use of computer technology and the Internet among the population and young people.

The fourth initiative is aimed at organizing systematic work to increase the spirituality of young people, wide promotion of reading among them.

The fifth initiative provides for the employment of women.

This noble idea of the head of state was met with great interest by the people of Uzbekistan, especially the youth, and in a short time it was widely spread throughout the country.

In accordance with these five initiatives, which will be widely implemented in real life in the future, the material and technical base and accessibility of cultural centers, music and art schools in the regions will significantly improve, based on the interest of young people, an additional 1.5 thousand circles have been created. Even in the most remote rural cultural centers, amateur art groups, youth studio theaters and "youth clubs" are being created. Measures will also be taken to maximize the

coverage of youth with more than 12 thousand sports facilities in the country; all secondary schools will be fully equipped with sports equipment. At the same time, in remote and remote areas, small gyms and playgrounds with artificial turf are constructed from sandwich panels of light construction. The number of children's and youth sports schools is increasing even more.

Based on the best international experience in protecting young people from malicious attacks on the Internet, teaching them the effective use of information technologies, digital technology training centers are being created in all regions. In these institutions, e-commerce and programming are taught free of charge, innovative business skills in the field of information technology are formed, "startup" projects are assisted. In general, Uzbekistan is making every effort and opportunity to create modern, advanced and innovative conditions for training young people, acquiring a profession, becoming mature people. Because the more attention is paid to the comprehensive support of the younger generation, bringing them up spiritually mature, physically healthy, patriotic and selfless, protecting their rights and interests, the higher its effectiveness will be.
