Before talking about the economy of Uzbekistan, you can initially consider the very emergence of the economy. Despite the fact that what sections the economy consists of. And of course, what the economy itself is needed for in the world. And what a major role does the economy itself play in the life of every person who strives for development.

Economics is the science of developing houses, farms, management, rules, laws and others. But the word economy itself is taken from the Greek language. And of course it appeared in the fourth century BC and was analyzed with Aristotle himself. He considered the economy from the side of economic activities, while in the very totality of social relations that is formed in the systems of production itself, distribution, exchanges, of course, the need is also included there. At the end of all this, he said that all this is developing in ensuring the good in everyone's life.

The most important thing is that economic processes actually represent both complex and all-encompassing systems. But in fact, these projects are contradictory conditions that limit resources and boundless needs of people and society. With the same sides, it is the main thing in development and of course all people use it as much as possible in order to save money, complete this task during and others.

Every day the economy of Uzbekistan is developing more and more and various economic categories of development are being adopted by the President of Uzbekistan, cooperating with different countries for their own and their own economic development to the full. At the same time, the economy is currently developing at a not slow pace. But of course every economic decision is developing more and more every day, and of course all developments are compared with each other.

If we talk about the economy, we immediately consider all export partners it includes such countries as: China, Russia, Kazakhstan, Turkey, Afghanistan, Kyrgyzstan, Tajikistan. Uzbekistan exports with these countries. Of course, exports include various services, gold, energy, petroleum products, textile products, metals of various colors and others.

At the same time, the country of Uzbekistan also imports with different countries such as China, Russia, the Republic of Korea, Kazakhstan, Turkey, Germany, Japan. In these countries, Uzbekistan imports such acquisitions as: machinery, equipment, chemical products, various non-ferrous metals. These developments have made Uzbekistan the most widespread and developed in various cases.

It is at the moment that Uzbekistan ranks 14th out of all countries in terms of natural gas production. And Uzbekistan ranks 3rd in exports, 6th in cotton production, as well as in other places among other countries. Of course, the economy of Uzbekistan began in 1991 and since that time the economy has been at a high level, occupying high places with its developments every day.

The economy with the words of people is explained in such a way as: the economy is the expansion of everything that has its own city, the economy is the development and transformation of what we have, as well as others. And at this time, the economy is relevant for everyone and of course has a major role in everyone's life.

Because the economy consists of a form and it is divided into several:

- market
- planned
- traditional
- mixed

Of course, they also develop the economy in their own way. With them, it is easy for people to develop the economy or invest their efforts in the development of the economy with various spheres.

And with this, the economy of Uzbekistan in 2022, its growth increased by 5.4%, the population is 995, and the number of dollars is 35.3 billion. all these numbers mean a lot, while with them a lot in the economy of Uzbekistan has risen to a high level at a step-by-step pace. This, in turn, reacted to imports and exports, too.

With this, I want to say that every development of the economy is needed in any area of development. At the same time, it shows its qualities, as well as sustainability, and proves that the economy is needed in everything and everywhere. Because of this, the economy of Uzbekistan occupies a good place among other countries with its exports, imports and others.
